PRIYANKA PRADHAN

• Data Analyst • Backend Developer • Auckland, New Zealand

0226015694 priyankapradhan212@gmail.com Portfolio LinkedIn GitHub

Available full-time (Post-Study Work Visa eligible)

PROFESSIONAL SUMMARY

Results-driven Data Analyst with 2+ years of professional experience across enterprise SaaS (Hitachi Energy) and startup environments (Afford IT). Proven track record of translating complex data into business decisions: modelled $1.3M in recoverable SaaS revenue, surfaced a 37.8% churn rate, and significantly improved forecasting accuracy through structured data quality frameworks. Proficient in Python (Pandas, NumPy, XGBoost, ARIMA), advanced SQL (window functions, ETL pipelines), Power BI, DAX, and Azure DevOps CI/CD. Completing a Master of Information Technology at Auckland Institute of Studies in May 2026. Actively upskilling in Tableau and Azure Data Factory. Seeking a full-time Data Analyst role from May 2026, with a strong backend development background that enables end-to-end ownership from data pipeline to insight.

CORE COMPETENCIES

SQL & Query Optimisation | ETL Pipeline Development | Data Cleaning & Transformation | Python (Pandas, NumPy, XGBoost, ARIMA) | Power BI & DAX | Data Modelling | SaaS Metrics (MRR, Churn, Retention) | Cohort Analysis | Statistical & ML Modelling | RESTful API Design | Azure DevOps & CI/CD | Laravel (PHP) | Agile / SCRUM | Git | Unit Testing & QA | Technical Documentation

PROFESSIONAL EXPERIENCE

Backend Developer Intern • **Afford IT** *Jun 2025 – Aug 2025*

Auckland, New Zealand

- Built and maintained production backend services using Laravel (PHP), contributing features shipped to live web and mobile applications.
- Developed and documented RESTful APIs consumed by React and Bootstrap frontends, enabling clean data exchange across service layers.
- Managed source code in Git within a collaborative team, applying branching strategies and peer code review practices to maintain production quality.
- Delivered features across full Agile sprint cycle including sprint planning, daily stand-ups, and retrospectives.

Software Engineer • **Hitachi Energy** *Feb 2023 – Jul 2024*

Kathmandu, Nepal

- Maintained and enhanced enterprise CTRM/ETRM TRM Tracker SaaS modules using PHP and JavaScript, supporting multi-client business-critical energy-sector operations.
- Wrote and optimised complex SQL queries across large financial datasets — **directly improving data retrieval performance and accuracy of business-critical reports** used by enterprise clients.
- Designed and integrated RESTful APIs enabling efficient data exchange between internal systems and third-party services, reducing manual data handling overhead.
- Automated build and deployment pipelines via Azure DevOps CI/CD, reducing manual release effort and minimising deployment downtime across client environments.
- Conducted unit testing and partnered with QA teams to identify and resolve defects — improving overall system stability and reliability.
- Documented technical designs, code changes, and processes in Confluence to support team knowledge sharing and accelerate onboarding.
- Collaborated within Agile / SCRUM teams across sprint planning, stand-ups, and retrospectives, consistently delivering features on schedule.

DATA ANALYTICS PROJECTS

SaaS Revenue Retention & Churn Analytics — GitHub

Tools: SQL • Power BI • DAX • Window Functions • Data Modelling • SaaS Metrics

$4.4M revenue analysed | **37.8%** churn rate identified | **$1.3M** recoverable revenue modelled

- **Problem:** B2B SaaS business had $4.4M in revenue at risk with no visibility into which customer segments were churning or why.
- **Action:** Engineered a SQL transformation layer using LAG() window functions, NULL handling, and validation rules. Built a DAX-powered What-If simulation in Power BI to model recovery scenarios across segments.
- **Result:** Surfaced a 37.8% churn rate, identified high-risk customer segments, and modelled up to $1.3M in recoverable revenue — providing stakeholders with a clear, actionable retention strategy.

Time Series Sales Forecasting with Data Quality Management — GitHub

Tools: Python • ARIMA • XGBoost • Pandas • Scikit-learn • IQR • Isolation Forest

Problem: Retail demand forecasting on Corporación Favorita's 4-year dataset (90,000+ observations, 2013–2017) was unreliable due to undetected outliers and data quality gaps.

- **Action:** Applied IQR and Isolation Forest anomaly detection as a structured DQM pre-processing layer, then benchmarked ARIMA and XGBoost forecasting models against a pre-DQM baseline.
- **Result:** Demonstrated statistically significant forecast accuracy improvements post-DQM, proving data quality is a first-order priority before any model tuning — a directly transferable business insight.

Payroll Management System (Full-Stack) — GitHub

Tools: Laravel • PHP • MySQL • REST APIs • RBAC

- Built a production-ready payroll system with secure authentication, attendance tracking, and automated monthly payslip generation via REST APIs.
- Optimised SQL queries for report generation, eliminating manual calculation errors and reducing report turnaround time.

TECHNICAL SKILLS

Data & Analytics:	Python (Pandas, NumPy, Matplotlib, Scikit-learn), SQL (window functions, CTEs, optimisation), Power BI, DAX, ETL Pipelines, Cohort Analysis, Data Modelling
ML / Forecasting:	ARIMA, XGBoost, Isolation Forest, IQR, Statistical Modelling — applied in production research projects
Programming:	Python, PHP (Laravel), JavaScript, HTML, CSS
Databases:	MySQL, SQL Server — large-scale query optimisation, indexing, data validation
Cloud & DevOps:	Microsoft Azure, Azure DevOps, CI/CD Pipelines, Git, GitHub
Tools:	Power BI, Jira, Postman, Confluence, SharePoint
Currently Upskilling:	Tableau, Azure Data Factory, Advanced Machine Learning

EDUCATION

Master of Information Technology *2024 – May7, 2026*

Auckland Institute of Studies — Auckland, New Zealand · ***Certificate of Academic Excellence***

Bachelor of Information Management – *CGPA: 3.78/4.0* *2018 – 2023*

Tribhuvan University

CERTIFICATIONS

Data Science and Machine Learning in Python · *Deerwalk Training Center, 2022*
