✓ Post-Study Work Visa holder • Available full-time • No sponsorship required

PROFESSIONAL SUMMARY

Results-driven Data Analyst with 2+ years of professional experience across enterprise SaaS (Hitachi Energy) and startup environments (Afford IT). Proven track record of building end-to-end pipelines from messy raw data to business insight — identified a 37.8% churn rate, modelling \$1.3M in recoverable revenue, and built a full NZ inflation analytics pipeline using Python, Snowflake, and Power BI revealing that Auckland has the lowest inflation in NZ. Proficient in SQL (window functions, CTEs), Power BI, DAX, Snowflake, and Python. Graduated MIT at Auckland Institute of Studies, May 2026. Seeking a Data Analyst or Junior Data Engineer role in NZ.

TECHNICAL SKILLS

Data & Analytics: SQL (window functions, CTEs), Power BI, DAX, ETL Pipelines, Data Modelling, Cohort Analysis

Cloud & Warehousing: Snowflake, Microsoft Azure, Azure DevOps, CI/CD

Programming: Python (Pandas, NumPy, Matplotlib, Scikit-learn), PHP (Laravel), JavaScript, HTML/CSS

Databases: SQL Server, SQLite, MySQL — star schema design, query optimisation, indexing, data validation

Tools: Power BI, Git, GitHub, Postman, Jira, Confluence, SharePoint

Upskilling: Tableau, Azure Data Factory

DATA ANALYTICS & ENGINEERING PROJECTS

NZ CPI Inflation Analytics — End-to-End Pipeline [GitHub ↗](#)

Tools: Python • Pandas • SQLite • Snowflake • Power BI • DAX • Matplotlib

- Built a complete end-to-end pipeline on Stats NZ CPI data — Python ETL (27-sheet Excel → 3 clean CSVs using `pd.melt()` and date parsing), SQLite star schema (5 tables, 8 window function queries), Snowflake warehouse (COPY INTO, `is_post_covid` derived column, Time Travel, Zero-Copy Clone), and Power BI dashboard (3 pages, 5 DAX measures).
- Analysis suggested Auckland recorded the LOWEST inflation in NZ (2.7%) vs Rest of South Island (3.9%) — and that housing costs are driven by energy (+12.3% YoY) and council rates (+8.2%), not rent (+1.2%).
- Identified the exact quarter (Mar-23) when NZ inflation shifted from import-driven to domestic-driven using `LAG()` window functions — the central analytical finding of the project.

SaaS Revenue Retention & Churn Analytics [GitHub ↗](#)

Tools: SQL Server • Power BI • DAX • Window Functions • Data Modelling

- Analysed \$4.4M in revenue — engineered SQL transformation layer using `LAG()` to track month-on-month revenue changes, built DAX-powered What-If simulation in Power BI for retention scenario modelling.
- Surfaced 37.8% churn rate concentrated in mid-tier FinTech segments (not low-tier as assumed) and modelled up to \$1.3M in recoverable revenue — redirecting stakeholder retention strategy.

Time Series Forecasting — Data Quality Study [GitHub ↗](#)

Tools: Python • Pandas • Scikit-learn • IQR • Isolation Forest

- Applied IQR and Isolation Forest anomaly detection as a DQM pre-processing layer on 90,000+ row retail dataset — demonstrating that data quality improvements produce more forecast accuracy gains than model tuning alone.

PROFESSIONAL EXPERIENCE

Backend Developer Intern • Afford IT

Jun 2025 – Aug 2025

Auckland, New Zealand

- Built and maintained production backend services using Laravel (PHP), shipping features to live web and mobile applications.
- Worked with relational databases and backend data flows supporting web/mobile application features.

- Developed and documented RESTful APIs consumed by React and Bootstrap frontends, enabling clean data exchange across service layers.
- Delivered features across full Agile sprint cycle including planning, stand-ups, and retrospectives within a collaborative Git workflow.

Software Engineer • Hitachi Energy

Feb 2023 – Jul 2024

Kathmandu, Nepal

- Wrote and optimised complex SQL queries across large financial datasets, directly improving data retrieval performance and accuracy of business-critical reports used by enterprise clients.
- Optimised enterprise SQL storage profiles and stored procedures across scale database configurations.
- Debugged production trading workflows, ensuring zero calculation drift during financial market settlements.
- Maintained and enhanced enterprise CTRM/ETRM TRM Tracker SaaS modules (PHP, JavaScript) supporting multi-client energy-sector operations.
- Automated build and deployment pipelines via Azure DevOps CI/CD, reducing manual release effort and minimising deployment downtime.
- Documented technical designs and API integrations in Confluence to support team knowledge sharing and accelerate onboarding.

EDUCATION

Master of Information Technology • Auckland Institute of Studies

Graduated May 2026

Certificate of Academic Excellence

Bachelor of Information Management • Tribhuvan University

2018 – 2023

CGPA: 3.78 / 4.0

CERTIFICATIONS

Data Science and Machine Learning in Python — Deerwalk Training Center, 2022
